Respectfully, yours,

W. HAVELBURG, M. D.,
Sanitary Inspector, U. S. M. H. S.

CUBA.

Sanitary report from Habana.

HABANA, CUBA, November 4, 1898.

SIR: The following report for the week ended Thursday, November 3, is respectfully submitted:

Yellow fever.—There were 6 deaths from yellow fever during the week; 4 occurred among the Spanish troops, 1 in a civil hospital, and the other occurred at No. 70 Oficios street, which is near the harbor. Apparently the disease is slowly declining, still the atmospheric and other conditions favorable to the spread of the disease are all present. For four days a northeast gale has prevailed, and as a result the temperature has been considerably lowered.

Malarial fevers.—There is a decided decrease in the number of deaths from the different forms of malarial fevers. Last week there were 94 deaths from these fevers, while this week there were 60 deaths. Americans seem to be predisposed to the remittent form, but so far as my observation goes (7 cases) it is mild in type, and yields in nearly every instance to quinine. I see no difference between the fevers in these few cases and those to be found in the Southern States.

There is absolutely no difficulty in differentiating them from yellow fever, yet some persons who have suffered from an attack are being given certificates of immunity to yellow fever.

The deaths from all causes are decreasing, the mortality for the present week being lower than any week since September.

The rainfall during the week has been excessive. Incidentally it may be stated that the rainfall for October was over 13 inches.

Very respectfully,

W. F. BRUNNER,
Sanitary Inspector, U. S. M. H. S.

The SUPERVISING SURGEON-GENERAL,
U. S. Marine-Hospital Service.

Mortality of the city of Habana for the week ended Thursday, November 3, 1898.

Cause of death.	Total.
